Week 10 Assignment: Personal Homepage

2018314520 전윤희

GitHub ID: cypsyco

1. Brief introduction of personal home page interface.

1) Main Page

The main page has my name and a top menu that allows you to go directly to each item. The Download Resume button is a button that allows you to download my resume right away.

+ Currently, this report file is downloaded when Resume button is clicked.

2) Introduction

About Me

I am a Java Spring web back-end developer with a strong foundation in computer science and a passion for creating robust and scalable web applications. With a comprehensive career spanning several years, I have honed my skills in developing efficient and maintainable code. My educational background includes CS major knowledge, such as database or operating systems. Throughout my career, I have consistently demonstrated a commitment to excellence and a proactive approach to problem-solving.

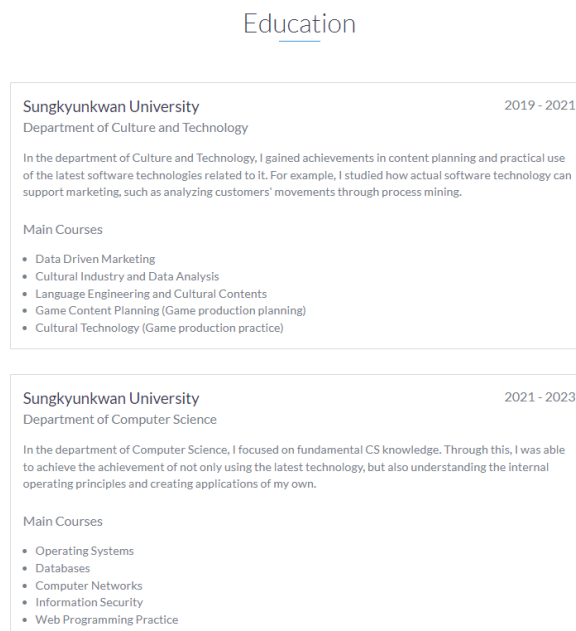

Introduction information is written in "About me" section. This section provides a brief introduction of myself as a software engineer. It contains my career summary and educational background.

3) Skills

Skills information is written in "Skills" section. This section lists my skills, such as languages and frameworks. Listed skills are Python, Java, C, JavaScript, React, Django Framework, Spring Framework.

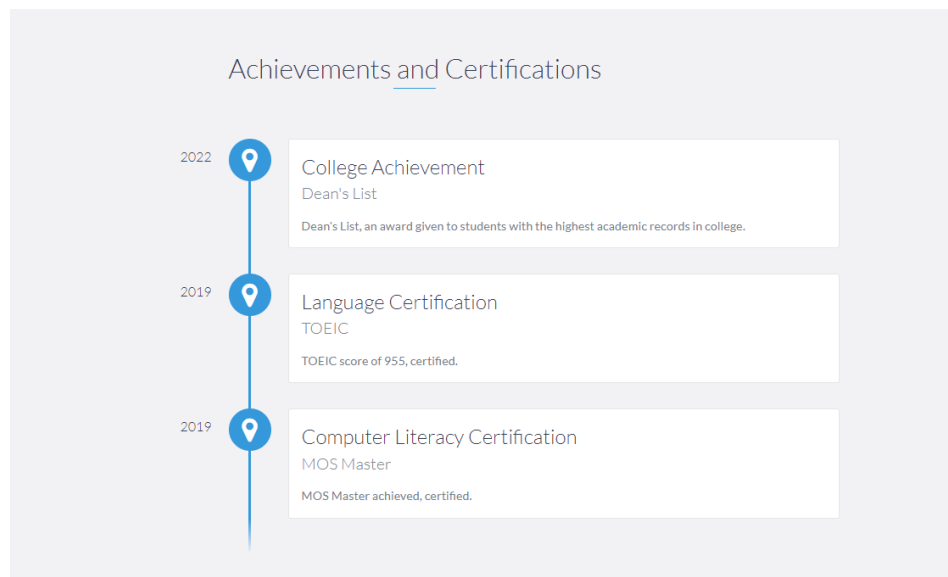

4) Education

Education information is written in "Education" section. This section provides details about my degrees, schools, major and academic accomplishments. It contains my degree in Department of Culture and Technology and Department of Computer Science. For each major section, it includes the year in which I studied each major,

information about the major, and main courses of the major that I have taken.

5) Achievements and Certifications

Achievements and Certifications information is written in "Achievements and Certifications" section. This section provides my College Achievement, Language Certification, Computer Literacy Certification.

6) Projects (Additional item)

Projects

Flea Market Using Django

Clothing flea market website that implements simple functions. Website provides features such as login, shopping cart, quantity selection, ordering, and admin management.

[View Project](#)

Vehicular Network Simulation in OMNeT++

Vehicular Mobility Management (VMM) using OMNeT++. Implementation of IPv6 Over IEEE 802.11-OCB and IPv6 Vehicular Neighbor Discovery.

[View Project](#)

Software project information is written in "Projects" section. This section provides brief information and GitHub link for each of my software project.

7) Contact

Get in Touch, jyh0872@gmail.com

Contact information is written in "Get in Touch, jyh0872@gmail.com". This section provides my email address, and by writing a message in the message field, people can contact me right away using form spree.

2. Detail summary of GitHub actions in personal homepage repository.

A) Workflow diagram of your GitHub actions

Triggered via push 2 minutes ago

 cypsyco pushed  92663c0 master

Status

Success

Total duration

27s

Artifacts

1

deploy.yml

on: push

 deploy

13s

<https://cypsyco.github.io/>

Artifacts

Produced during runtime

Name	Size
 github-pages	1.52 MB

deploy

succeeded 19 hours ago in 10s

>  Set up job

>  Checkout

>  Setup Pages

>  Upload artifact

>  Deploy to GitHub Pages

>  Post Checkout

>  Complete job

Through GitHub actions, my personal homepage is deployed right away on when there is a push to the default branch.

B) Line by line annotation of YAML or YML file under '.github/workflow' directory

Simple workflow for deploying static content to GitHub Pages

name: Deploy static content to Pages

➔ Defines the name of the workflow.

on:

Runs on pushes targeting the default branch

push:

branches: ["master"]

➔ This workflow runs when pushed to the default branch, "master".

Allows you to run this workflow manually from the Actions tab

workflow_dispatch:

➔ You can run this workflow from the Actions tab manually using the "workflow_dispatch" event.

Sets permissions of the GITHUB_TOKEN to allow deployment to GitHub Pages

permissions:

contents: read

pages: write

id-token: write

➔ Set permissions on GITHUB_TOKEN to allow deployment to GitHub Pages. Permissions to read content, write page, and write ID token are set.

Allow only one concurrent deployment, skipping runs queued between the run in-progress and latest queued.

However, do NOT cancel in-progress runs as we want to allow these production deployments to complete.

concurrency:

group: "pages"

cancel-in-progress: false

- ➔ Set to allow only one deployment at a time within the "pages" group.
- ➔ Set "cancel-in-progress" to false to allow ongoing deployments to complete without canceling them.

jobs:

Single deploy job since we're just deploying

deploy:

environment:

name: github-pages

url: https://cypsyco.github.io/

runs-on: ubuntu-latest

- ➔ Define a task called "deploy". This task serves as a deployment to GitHub Pages.
- ➔ Set up an environment called "github-pages" and specify the URL of the deployed page.
- ➔ Set it to run under "ubuntu-latest".

steps:

- name: Checkout

uses: actions/checkout@v3

- ➔ The "Checkout" step checks out the repository.

- name: Setup Pages

uses: actions/configure-pages@v3

➔ Set up Pages using the "configure-pages" action.

- name: Upload artifact

uses: actions/upload-pages-artifact@v2

with:

Upload entire repository

path: '.'

➔ Upload artifacts using the "upload-pages-artifact" action, which uploads the entire repository.

- name: Deploy to GitHub Pages

id: deployment

uses: actions/deploy-pages@v2

➔ Deploy to GitHub Pages using the "deploy-pages" action. This action performs a deployment using the previously uploaded artifact.
